

BSEd Mathematics Chairperson Interview Guide

ExamiQ+ Pilot Study — Semi-Structured Department Interview

This guide supports a 45–60 minute semi-structured interview with the Department Chairperson of the College of Education (or equivalent program lead for BSEd Mathematics). The goal is to understand institutional needs, curriculum alignment, faculty intervention gaps, and features that would give ExamiQ+ a defensible edge beyond student self-review.

Format: Use open-ended questions with follow-up probes. Record with consent. Take notes on pain points, desired outcomes, governance concerns, and adoption barriers.

Block 1 — Department Context and Student Pain Points

1. What are the top three challenges BSEd Math students face in mathematics courses?

Probe: Probe: year level differences, major vs GE math, practicum readiness.

2. Where do students struggle most: content knowledge, problem-solving under time pressure, or explaining and teaching math?

Probe: Probe: which courses show the pattern most clearly.

3. How do you currently measure whether a student is ready for exams — scores only, or something else?

Probe: Probe: rubrics, consultations, formative assessments.

4. Do you see patterns of overconfidence (students think they know material but fail exams)?

Probe: Probe: examples from recent terms.

5. How do students typically prepare for licensure exams or major assessments?

Probe: Probe: formal review programs, self-study, commercial apps.

Block 2 — Current Practices and Gaps

6. What tools do faculty and students use today for math review?

Probe: Probe: LMS, printed drills, YouTube, commercial apps, tutoring.

7. What is missing in those tools from a department perspective?

Probe: Probe: reporting, timing, misconception diagnosis, governance.

8. How do faculty currently identify students who need intervention before it is too late?

Probe: Probe: triggers, timing in the term, follow-up actions.

9. How much time do faculty spend creating or reviewing practice questions versus teaching?

Probe: Probe: workload pain points.

10. Is there a formal process for ensuring question quality and alignment with CHED or program outcomes?

Probe: Probe: who approves content, how often it is updated.

Block 3 — ExamiQ Fit and Institutional Edge

11. Would a system that flags misconceptions and calibration gaps (not only low scores) be useful for faculty intervention?

Probe: Probe: preferred report format, ideal timing.

12. How valuable is timed exam simulation compared to untimed practice with immediate answers?

Probe: Probe: fit for licensure prep vs classroom quizzes.

13. How important is chairperson approval of questions before students see them?

Probe: Probe: quality control, liability, academic integrity.

14. Would department-level analytics by topic, section, and year level support program improvement or accreditation?

Probe: Probe: which metrics matter most.

15. What data would you want in a research or intervention export?

Probe: Probe: high misconceptions, low practice frequency, calibration gaps.

Block 4 — BSEd Mathematics Curriculum Alignment

16. Which math topics should BSEd Math review prioritize?

Probe: Probe: major courses, methods courses, GE math, statistics.

17. Should review content reflect K–12 math competencies students will eventually teach?

Probe: Probe: DepEd alignment, practicum relevance.

18. Do you want questions written in a teaching-oriented style (for example, diagnosing a student's wrong solution)?

Probe: Probe: pedagogical content knowledge vs pure computation.

19. How should the system support microteaching or practicum preparation?

Probe: Probe: explanation practice, misconception spotting, lesson planning links.

Block 5 — Adoption, Governance, and Sustainability

20. What would convince faculty to require or recommend ExamiQ instead of treating it as optional?

Probe: Probe: assignments, review windows, chair endorsement.

21. What concerns do you have about AI-generated questions, feedback, or tutor chat?

Probe: Probe: accuracy, bias, academic integrity, approval workflow.

22. What training or support would faculty need to use intervention dashboards and CSV exports?

Probe: Probe: onboarding, documentation, demo sessions.

23. If ExamiQ succeeds, what outcome would you cite as proof?

Probe: Probe: pass rates, LET performance, fewer remedial cases, teaching confidence.

Closing Questions

24. If you could add one capability that no LMS or commercial review app offers for BSEd Math, what would it be?

Probe: Probe for unique departmental needs.

25. What would make this thesis contribution meaningful to your department beyond being a student project?

Probe: Probe for sustainability, policy, or institutional adoption.

Appendix — Institutional Needs to ExamiQ Edge

Summarize chairperson responses using this mapping when drafting thesis recommendations and defense talking points.

Department need	ExamiQ capability
Misconception and calibration flags	Faculty intervention list and chair program dashboard
Curriculum-aligned content	BSEd Math program scoping and chair question approval
Exam readiness under time pressure	Timed exam mode with post-session summary
Department-wide visibility	Cross-program analytics and course audit
Evidence for program improvement	Anonymized research CSV export
Future-teacher preparation	Teaching-oriented items and error-type feedback
